bead stringing tool

Package includes:

- One Spin & String Mini tool
- One Spin & String Mini needle

A fun & simple way to
string seed beads for
jewelry, fringe & more!

the
**BEAD
SMITH**®

#SW16

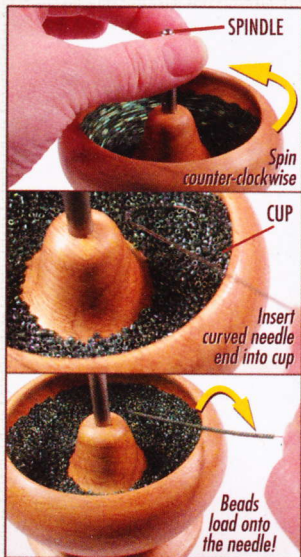

This unique device is hand crafted of hard wood and is an absolute must for anyone looking to create fringe, multi-strand necklaces, appliqués, and hanks. An excellent time saver!

Before you begin...

- Make sure you are working on a *level* surface.
- Measure your thread to be 10 inches longer than the length of beads that you need.

Instructions:

1. Thread your needle and either knot the end, or leave it attached to the spool of thread. To avoid getting your thread tangled, tuck the short end between plies of the longer end.
2. Put seed beads into the cup, filling it about halfway.
3. Rotate the center spindle counter-clockwise with your left hand (*not too fast or your beads may fly out*). The beads will gravitate toward the outer wall of the cup.
4. With the needle in your right hand and place the curved end horizontally into the beads near (but not touching) the outer wall of the right side of the cup. The beads will load onto the needle very rapidly.
5. Once you have a couple of inches of beads on the needle, carefully lift up the curved end & then push the beads down onto the thread. Repeat the whole process of spinning & stringing until you've reached the desired length of beads.

If you have difficulty, try experimenting with different needle positions and spinning directions to find a combination that is most comfortable & effective for you.
